Introductions

A Quick Poll

A Quick Poll

- A problem-solving puzzle.
- Discussion / Extended Q & A with the team.

Puzzle!

- There is some existing open-source software that we use.

Puzzle!

- There is some existing open-source software that we use
- It's got some configuration file

Puzzle!

- There is some existing open source software that we use
- It's got some configuration file

```
menuentry 'Ubuntu' {  
    recordfail  
    load_video  
    gfxmode $linux_gfx_mode  
    insmod gzio  
    linux /boot/vmlinuz-5.4.0-139-generic root=/dev/mapper/ubuntu--vg-root ro  
    initrd /boot/initrd.img-5.4.0-139-generic  
}
```

Puzzle!

- There is some existing open source software that we use.
- It's got some configuration file

```
menuentry 'Ubuntu' {  
    recordfail  
    load_video  
    gfxmode $linux_gfx_mode  
    insmod gzio  
    linux /boot/vmlinuz-5.4.0-139-generic root=/dev/mapper/ubuntu--vg-root ro  
    initrd /boot/initrd.img-5.4.0-139-generic  
}
```

- We need to be able to read, update, and validate this configuration.

Puzzle!

- There is some existing open-source software that we use.
- It's got some configuration file

```
menuentry 'Ubuntu' {  
    recordfail  
    load_video  
    gfxmode $linux_gfx_mode  
    insmod gzio  
    linux /boot/vmlinuz-5.4.0-139-generic root=/dev/mapper/ubuntu--vg-root ro  
    initrd /boot/initrd.img-5.4.0-139-generic  
}
```

- We need to be able to read, update, and **validate** this configuration.

Puzzle!

- There is some existing open-source software that we use.
- It's got some configuration file

```
menuentry 'Ubuntu' {  
    recordfail  
    load_video  
    gfxmode $linux_gfx_mode  
    insmod gzio  
    linux /boot/vmlinuz-5.4.0-139-generic root=/dev/mapper/ubuntu--vg-root ro  
    initrd /boot/initrd.img-5.4.0-139-generic  
}
```

- We need to be able to read, update, and **validate** this configuration.

Your Turn!

- ⌘(Cmd) + Space Type in 'terminal' (Enter)

```
cd kori_exercises/valid_parens  
pyenv activate kori  
codium .
```

- You should see a file called 'Problem.md' and validator/validator.py
- Have a read. If you are stuck, feel free to ask questions!

Appendix

- Setting up a python environment:
- Install Homebrew (<https://brew.sh>)
- `brew install pyenv pyenv-virtualenv`
- `pyenv install 3.10.10`
- `pyenv virtualenv 3.10.10 <name>`
- `pyenv activate <name>`
- The editor we use is called **vsodium** (it's free!):
- `brew install vsodium`
